PROJECTS

Forecastly

- **Developed a weather dashboard** using **Vue.js** with **TypeScript**, incorporating component-based architecture and strongly-typed API integration for reliable weather data retrieval and state management
- Implemented comprehensive frontend features including geolocation services, city search with TypeScript interfaces, and responsive design patterns, ensuring code reliability through static typing and Vue's composition API

BlogFlow

- **Developed a dynamic frontend project** built with Vue.js, featuring a responsive blog platform with functionalities like category-based filtering and a search feature for seamless content discovery.
- It incorporates reusable components, a centralized Vue store for state management, and clean, modern UI/UX design elements using Tailwind CSS.

Notionary

- **Developed a full-stack notes web application** using React, TypeScript, Express.js, and MongoDB, implementing user authentication and CRUD operations for note management.
- Integrated session-based authentication with Express Session for secure user login and built a responsive, mobile-friendly UI, ensuring smooth user experience across devices

EDUCATION

Technion - Israel Institute of Technology, Haifa —
Software Practical Engineering

December 2023 - June 2026

Familiarity

Programming Languages
- Java
- Java Script
- TypeScript
- C sharp
- Python

Tech Stack
- Git
- Node JS & Express
- PostgresSQL & MySQL
- Prisma
- Mongo DB
- Postman
- Vite
- Vue js
- React
